EDUCATION:

Master of Science in Computing and Information Systems | *Youngstown State University* | *Youngstown, Ohio*

Jan 2023 – Dec2024

Bachelor of Science in Electronics and communication engineering | *Sridevi Women's Engineering College* | *Hyderabad, India*

Jul 2017 – Aug2021

TECHNICAL SKILLS:

Languages: Java, C#, C, C++, Python, HTML, CSS, TypeScript, JavaScript

Web & Application Technologies: Angular, ReactJS, Node JS, SERVLETS, JSP, JavaBeans, Bootstrap

Frameworks: Spring Boot, Spring Security, Hibernate, .NET, Blazor

Databases: Oracle 19c, MS SQL Server, MySQL, MongoDB, DynamoDB

Messaging & Queue Systems: RabbitMQ, Kafka

Reporting & Analytics: Crystal Reports, Qlik, SSRS, Tableau

Cloud & DevOps: AWS, Azure, Docker, OpenShift, CI/CD, CloudFormation, Ansible, Puppet

Web Servers & Tools: Apache Tomcat, Jetty, Jenkins, WebSphere MQ, Dynatrace, Splunk, Grafana, Logstash, JIRA, ServiceNow

Other Skills: SDLC, DSA, Linux

PROFESSIONAL EXPERIENCE:

Florida Department of Health | Software Engineer II

Jan 2026 - Present

- Built Python/Flask backend services for a statewide healthcare regulatory application serving 50,000+ patients, managing clinical records, license workflows, and compliance operations across integrated data sources.
- Engineered RESTful APIs enabling secure data exchange between administrative and patient-facing applications; improved average response latency by 30% through query optimization and response caching.
- Tuned SQL Server stored procedures and T-SQL queries for healthcare data pipelines, cutting report execution time by 40% and eliminating manual reconciliation spanning three integrated data sources.
- Deployed and maintained AWS infrastructure (EC2, S3, RDS) with CI/CD pipelines enabling zero-downtime releases; implemented RBAC aligned with healthcare compliance requirements.
- Collaborated in an Agile/Scrum environment; authored API documentation, conducted peer code reviews, and maintained Git-based version control with a cross-functional engineering and compliance team.

Florida Department of Financial Services | Software Engineer I

May 2025 – Jan 2026

- Modernized legacy enterprise applications using Java with responsive frontends in Angular, Vue.js, Blazor, CSS, and Bootstrap, improving performance, accessibility, and user experience across multiple state services.
- Designed and implemented event-driven REST and SOAP services using Java microservices with Orchestrator patterns for Insurance Regulation, Fire Marshall, State Cemetery, and Law Enforcement workflows, ensuring reliability and scalability.
- Migrated legacy webforms to modern Java APIs and microservices, preserving core business logic, reducing technical debt, and enabling easier maintenance and future enhancements.
- Integrated cloud infrastructure using Azure VMs, Azure SQL, App Services, and Logic Apps, with automated CI/CD pipelines, monitoring, and alerting, reducing deployment times and increasing system uptime and resiliency.
- Strengthened application security by mitigating SQL Injection, XSS, and CSRF, implementing secure coding practices, content security policies, connection string encryption, and centralized authentication, enhancing overall enterprise security posture.
- Delivered advanced reporting and analytics using Crystal Reports, Qlik, SSRS, Tableau, and leveraged AI tools, including GitHub Copilot and on-premises LLMs, to accelerate development, generate proof-of-concepts for chatbots, and enable intelligent business insights.

Star Data Solutions | Software Engineer Intern

Aug 2024 – Apr 2025

- Developed and maintained a Single Page Application (SPA) using Angular 4, implementing smooth navigation across multiple modules, handling dynamic user interactions, and ensuring consistency and usability throughout the application interface.
- Engineered Applied advanced SEO techniques and optimized callback functions to efficiently parse, handle, and display JSON responses from server-side APIs, improving page responsiveness, data rendering, and overall user experience.
- Designed, developed, and deployed REST API microservices using Spring Boot, Spring Data, and Spring REST, Integrating with Oracle and MongoDB databases, managing data flow, ensuring consistency, and supporting scalable backend operations.
- Implemented asynchronous messaging workflows using RabbitMQ and Kafka, designing reliable message queues and topics to enable seamless communication. Coordinated migration, ensured message durability, handled error recovery, and optimized throughput for scalable data exchange.
- Configured AWS cloud infrastructure (EC2, S3, RDS, VPC, IAM, CloudWatch, Elastic Beanstalk). Built automated deployment pipelines using CloudFormation, implemented logging and alerting, optimized resource usage, and maintained secure, scalable, highly available environments.

Wipro Technologies | Project Engineer

Nov 2021 – Dec 2022

- Built performance monitoring dashboards and visualization pages using Splunk, ELK Stack, and Grafana, enabling stakeholders to monitor system health, detect anomalies, and make data-driven operational decisions. Performed log ingestion, parsing, and transformation using Logstash and Python from Linux and Windows servers across on-prem and cloud environments.
- Optimized server monitoring and log processing workflows by designing and configuring robust automated pipelines using Ansible, Puppet, and CI/CD tools. Efficiently managed containerized applications with Docker and OpenShift, deployed microservices scalable operations, and ensured accurate log forwarding, indexing, and real-time alerting to maintain high system reliability and performance.
- Designed monitoring services and alerting mechanisms to support incident management and operational reporting. Documented configurations, dashboards, data pipelines, and leveraged Git for version control and automated deployments across environments.

PROJECT:

Chat2DB (AI SQL Tool)

- Built an AI-powered database assistant (Chat2DB-like system) using Java and LLM integration that converts natural language into optimized SQL queries, enabling users to interact with relational databases (MySQL, PostgreSQL) without writing manual SQL.
- Designed and developed a full-stack database management platform with multi-database connectivity, schema visualization, and AI-driven query optimization, improving query generation efficiency and making database interaction more accessible and intelligent.
